Integration routine. Y0R9-2000-0582US (8128-402) 315

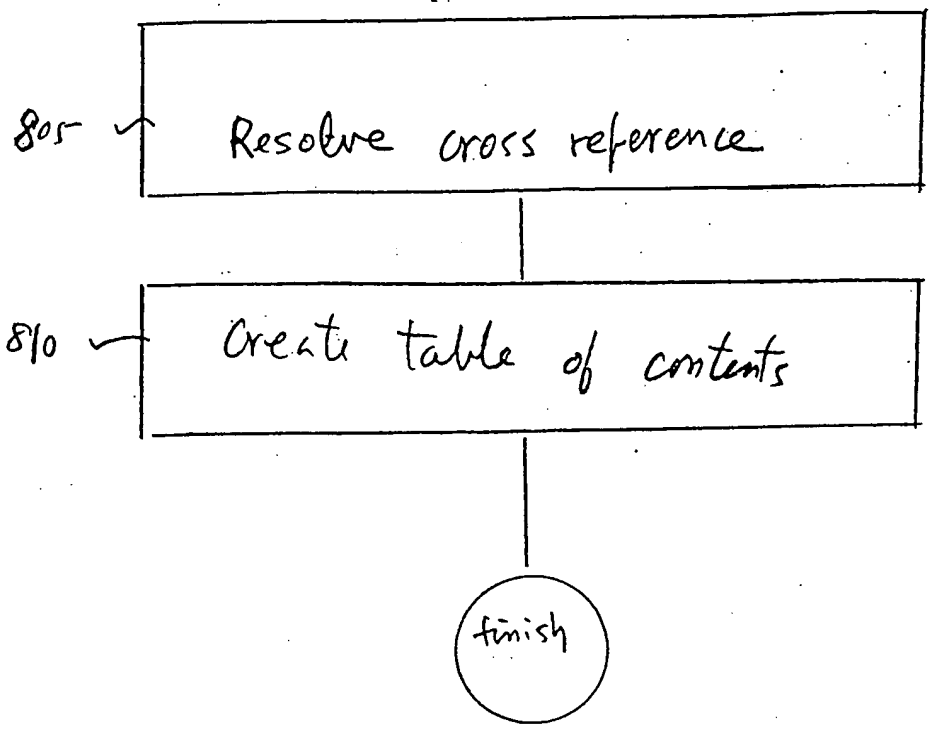

Figure 8

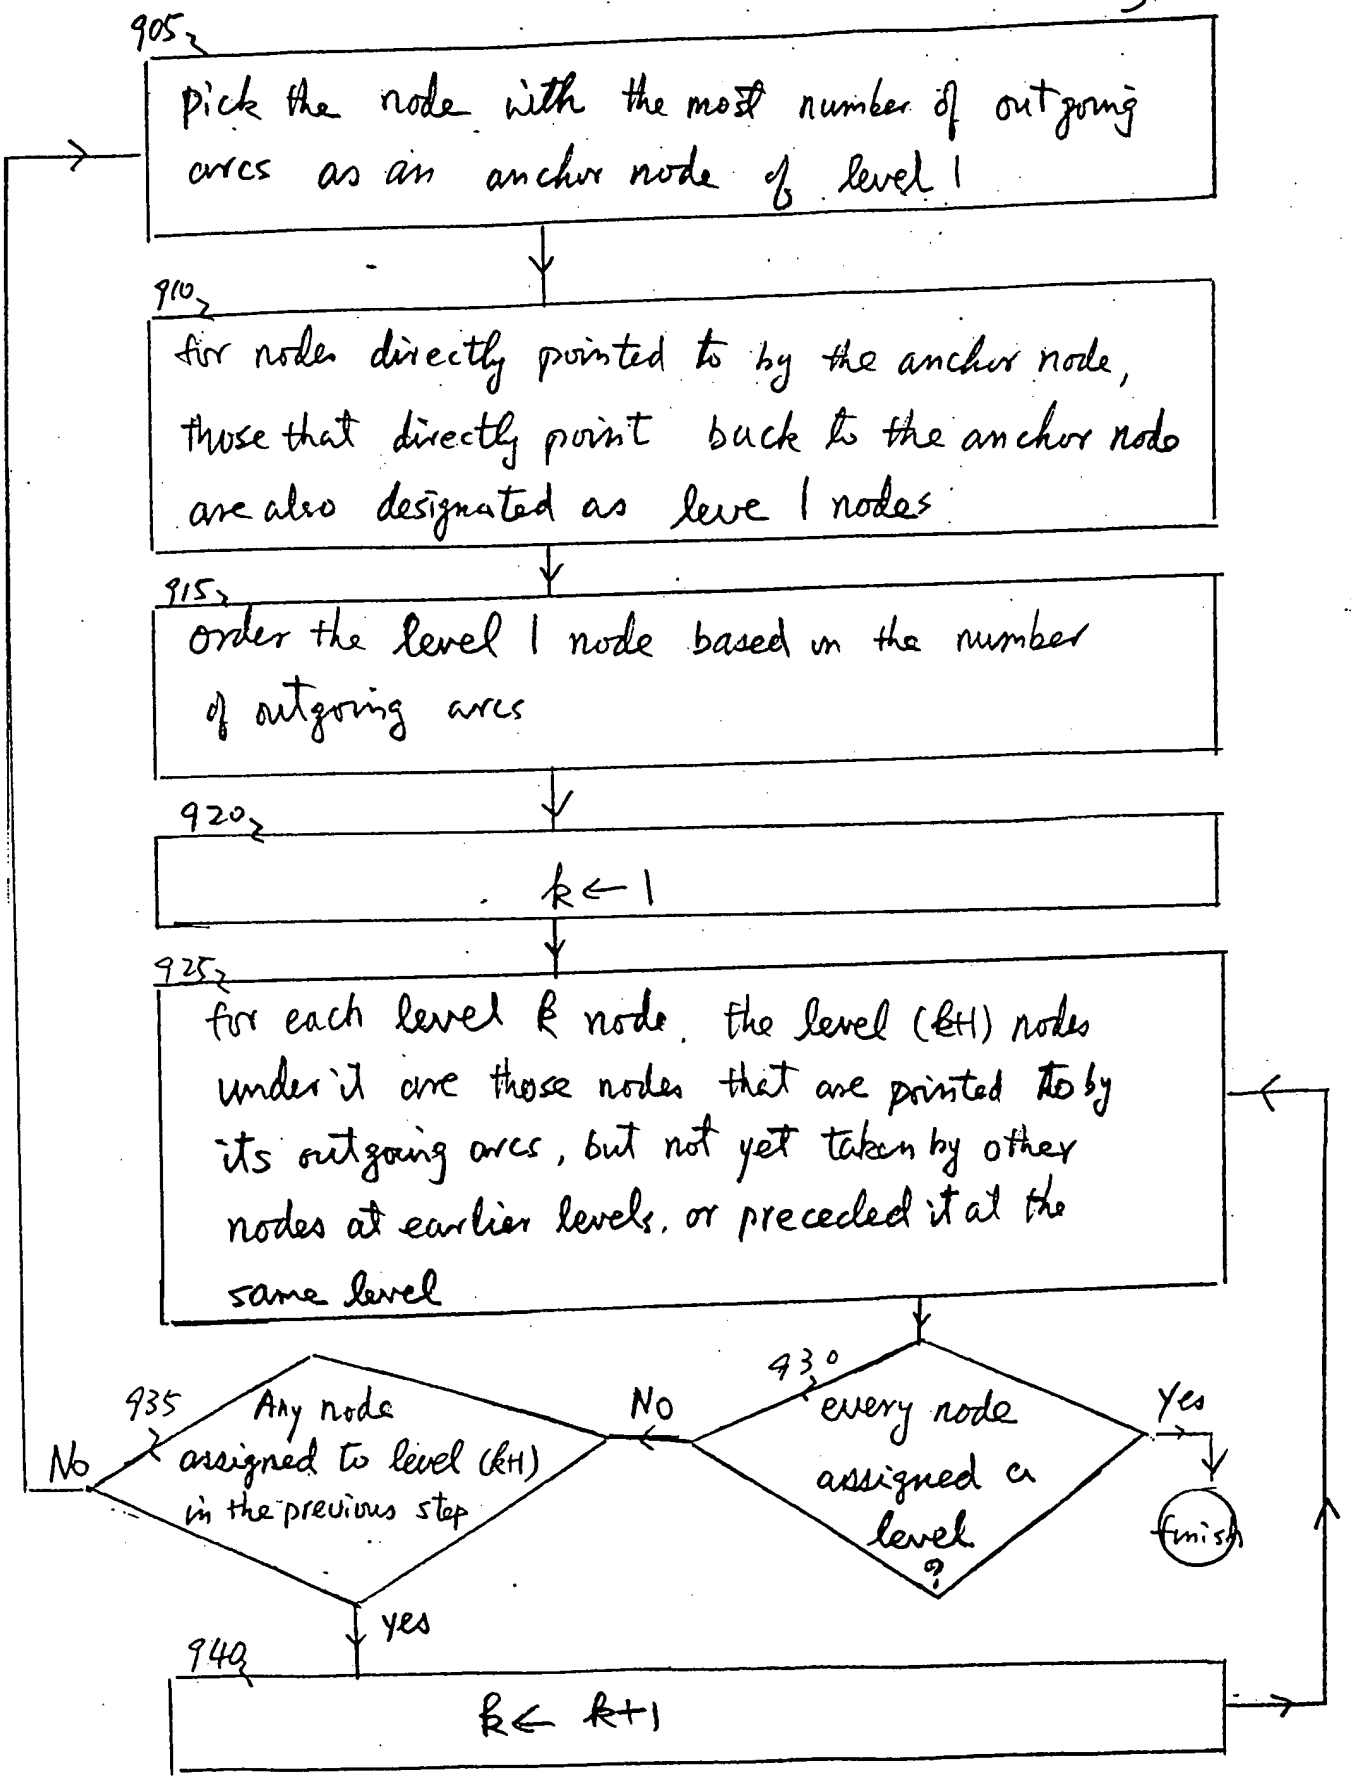

905
pick the node with the most number of outgoing arcs as an anchor node of level 1
910
for nodes directly pointed to by the anchor node, those that directly point back to the anchor node are also designated as level 1 nodes
915
order the level 1 node based on the number of outgoing arcs
920
k ← 1
925
for each level k node, the level (k+1) nodes under it are those nodes that are pointed to by its outgoing arcs, but not yet taken by other nodes at earlier levels, or preceded it at the same level
930
every node assigned a level ?
Yes
finish
No
935
Any node assigned to level (k+1) in the previous step
No
yes
940
k ← k+1
